The EuroCage™ is based on a design used by many European bird breeders. The cages can be used singly or in stacks of three high, covering an entire wall or room. The cages are light, sturdy, have powder-coated fronts and durable white plastic sides. These opaque sides are an important part of successful breeding; they separate the pairs so they can hear each other without seeing each other. Each unit can be equipped with a fluorescent light to show the birds to their best advantage. Nestboxes can be placed on a platform inside the cages which assures that banks of cages can be neatly fitted together. The design of the cage allows for maximum hygiene with minimum effort, and the high quality aluminum tubing is designed for a lifetime investment. Any questions...

NFSS MISSION STATEMENT

The National Finch & Softbill Society is dedicated to the introduction of the enjoyment of keeping and breeding of Finches and Softbills to all interested parties, enhance the knowledge of our members in keeping and care of their birds, encourage breeding programs, and cooperate with organizations for the preservation of aviculture.

JOURNAL OF THE NATIONAL FINCH AND SOFTBILL SOCIETY

918 Georgia Ave. • Etowah, TN 37331

Published Bi-monthly by NFSS

Submitting Materials for Publication. Submit all materials to Gertrude A. Noble at gertanoble@aol.com. Members are encouraged to submit articles and photographs. NFSS reserves the right to edit and/or reject all written, photographic, and advertising materials submitted for publication to the Journal. Deadline for submissions: 15th day of November, January, March, May, July, and September for the following issue.

Editorial Policy. NFSS-affiliated clubs have permission to reprint all articles and photos, with the following exceptions: articles and photos labeled “*All Rights Reserved*” require the copyright owner’s permission and all “*Reprinted by Permission of*” articles require written permission from the originating source. Opinions expressed or facts reported in articles and published in the Journal do not necessarily reflect the view of the Editor, NFSS, or the Board of Directors. Advertisements published in the Journal do not imply endorsement by NFSS. NFSS assumes no responsibility for advertisers’ claims or the quality of their products and services.

Journal and NFSS Dues. New memberships and late renewals (expired memberships) received by the 15th day of any month immediately preceding a journal issue will receive six issues, beginning with the issue immediately following the month they joined. For dues received after these cutoff dates, the first issue will be one issue later. Cutoff dates to receive the next published issue are as follows: the 15th day of December, February, April, June, August, and October.

COVER PHOTO

SISKIN FINCH

Carduelis cucullata

NFSS wants to thank Paula Hansen for sharing the photo of this female Red Siskin. She is wearing an NFSS black band with white lettering which indicates a 4/2010 hatch. This hen was paired with a 2007 male, producing three chicks in April, 2011, and one chick in December 2011. Paula heads up the Finch Save Red Siskin Group.

PRESIDENT'S MESSAGE

ANNOUNCEMENTS

We've been well behind schedule with the Journals and are now close to catching up, thanks to the efforts of our new editor Gerta Noble and Second VP Barbara Jaquez. One of the consequences has been that members haven't been aware their memberships were expiring. Please check the mailing label date at the top of the address label; this is your membership expiration date.

It's also a good time to check the affiliates listings to make sure your club's contact and show information is listed accurately. Our goal is to work with clubs and individual members to promote the hobby but we need and appreciate your help in getting the job done.

For membership questions, contact our Membership Director, Tiffany Park, membership@nfss.org; for affiliated club questions, contact our Affiliations and Awards Liaison, Jody Lewis, affiliationsdirector@nfss.org.

FINCH SOFTBILL SAVE THE SPECIES GROUPS AND CENSUS

The 2011 Finch Softbill Save census can be found on pages 27-35 of this issue or by visiting our website at www.nfss.org and following the links under the Finch/Save banner to the 2011 Census results at <http://www.nfss-fss.org/Census/CensusReport.aspx>.

If you are interested in a species or presently keeping a species and looking for out-crosses the NFSS Census is an excellent place to locate other breeders. Under the Finch/Save program we have species groups.

These are internet lists whose focus is on a single or several closely related species (**See Page 26**). The groups as of this writing are

- NFSS-FSS – *Amandava*—Strawberries Goldbreast
- NFSS-FSS – *Carduelis cucullata*—Red Siskins
- NFSS-FSS – *Coliidae*—Mousebirds
- NFSS-FSS – *Erythrura*—Parrot Finches
- NFSS-FSS – European—Softbills
- NFSS-FSS – *Pynonotus*-Bulbuls
- NFSS-FSS – *Serinus*—Group
- NFSS-FSS – *Uraeginthus*—Blue-Purple Waxbills

If you keep any of these birds, look into joining the group. We're looking for leaders for the European-Softbills and the *Serinus*-Group. If you're breeding members of either group and would like to build a community of breeders we can help to make it happen.

The 2012 National Cage Bird Show this year is in St. Louis, Missouri, Thursday November 15 thru Saturday November 17, 2012 at the Millennium Hotel in St. Louis. I hope to see you there.

RED SISKIN
Carduelis Cucullata

by *Ron Castaner*

Former NFSS President
AFA South Florida Regional Director
E-mail: finches@bellsouth.net

The Red Siskin is a small red-and-black finch about 10cm, or four inches long. The male has a red-with-black head, bib, and tail. Its black wings have broad red bars across the flight feathers. The female is mainly light brown but more dusky on the wings and tail. She has a red rump, wings-bar, and primary bases. There is a red wash to the flanks but otherwise grayish. The song is a twittering series of trills and chatters; a raspy, jut-jut call.

This species is now very small and severely fragmented, primarily as a result of trapping for the cage-bird trade. Some of the forest destruction is contributed to their loss.

The range and population for the *Carduelies Cucullata* was common in the early 20th century but has become extremely rare in a now-fragmented forest range. It once occurred throughout the foothills of Northern Venezuela, but recent sightings are restricted to just four states. It has disappeared from Trinidad, where it was never anything other than rare. A small population persists north of Santader, Colombia, where a record in February 2003 is apparently the first since 1978. A population in Puerto Rico, derived from escaped cage-birds, has undergone a marked decline and there are very few recent records. The population has been estimated in the high hundreds or low thousands, but the paucity of recent records indicates that even this may be an overestimate.

Found at a 900- to 4200-foot elevation (280-1,300m) they tend to move semi-nomadically and attitudinally to seasonally moist evergreen forest, preferring dry deciduous woodland and associated shrubby edge habitats. The main breeding period is from May to early June in the wild. They place their nest in clumps of *Tillandsia* bromeliads in tall trees.

The Red Siskins existence is enormously threatened due to the long-term (and since 1940, illegal) pressure from the bird trade because of its capacity to hybridize with canaries. Intensive agriculture continues to reduce available habitat. Diseases and the ability to get new bloodlines hamper captive-breeding programs. We hope with public awareness, captive-breeding efforts internationally and locally here in the United States we can get the population of the Red Siskin to a level of non-extinction.

JUST FINCHES and Softbills Magazine

While focusing primarily on Australasia, this magazine incorporates what's happening with finches & softbills from many overseas locations as well, including, South Africa, America, Europe and the U.K.

Published quarterly, we look at many different species as well as breeders setups. We also have a Question & answer section and provision for comments from a leading avian vet.

Growing in distribution with each issue.

SISKIN BREEDING HINTS

Paula Hansen

Paula Hansen is a long-time member of NFSS. In addition to being the Band Secretary and volunteering to help whenever possible, she heads up the **NFSS FINCH AND SOFTBILL SAVE** Parrot Finches, *Erythrura* group.

The most important part of breeding is preparing the birds before breeding season begins, which is from October to April.

SOAKED SEED . . . Any oily seed can get rancid when wet and warm. Refrigerate soaked mixes and only prepare 2-3 days worth at a time and serve what will be eaten between feedings. Some breeders freeze pre-soaked seed for use later. Freezing does not hurt the seed or supplements you add in the mixture. It is vital to get parents used to foods you offer before eggs are laid. If you use soaked seed during your birds breeding season your young will not look so dehydrated. The additional moisture to their diet is a benefit. Upon fledging chicks will learn to open (hull) seed easier. Parents also have an easier time feeding. I usually add extra oat groats to my mix because I have observed that is the first seed the parents go for.

SPROUTED MILLET . . . Pre-breeding season (January/February). Siskins seem to like dry millet as is. I offer it as a treat, not for breeding season. Non-breeding season (June to December), Siskins will dine on it. Millet is not necessary but a good addition to the diet.

FRESH VEGETABLES AND FRUIT . . . Romaine lettuce, broccoli, peas, corn, zucchini, apple (sweet apple varieties) should be fed a few times a week all year long. Most prefer golden and red delicious apples. **NOTE:** They like their fruit and vegetables clipped to the cage, not lying on the floor. Use clothes pins; cheap and easy.

EGG FOOD . . . Whether they take it or not, it is important to feed mashed egg food from start to finish during breeding season. Mother will usually use egg food to feed her chicks from day one through day eight, then taper off to the soaked seed mix. I continue to offer the egg food because the chicks will start eating on their own and that is what they will start with.

VITAMIN SUPPLEMENTS . . . Yes, they are necessary. There has been no special recommendation made for Siskin pairs. Should you choose to do so, you can use a good, balanced vitamin supplement in their water. Do not let this treated water stand in direct sunlight, under warm environment because it will generate bacteria. Dry vitamins made to be sprinkled over egg food, fruit, and vegetables. I add water soluble mix to my soak seed mix. It is not recommended to sprout seed soaked in vitamin water mix. When purchasing from a shop check those expiration dates. Most female finches and Siskins need to replenish nutrients into their system vitamins & minerals can assist in this process during resting season and breeding season.

FOSTERING . . . Not at all necessary but should you consider to do so, now or later, use a female Canary. They are cheap and usually reliable. Make sure the female Canary is healthy and use quarantine practices prior to breeding season. Keep the canary pair in the same mode as the Siskin pair. Remove a few of the foster canary eggs and place under another canary. Babies should be placed under the foster canary when pin feathers appear (about 8-10) days old.

Please Note: Canary babies are much larger than Siskins, so a newly hatched Siskin may be too small for a large Gloster canary to feed. Try to foster with a smaller type, such as a Fife or Red Factor canary. I prefer doing this between one-half and one hour before the lights go out. Hens will be more willing to sit on the Siskin chicks.

Try this when you have some days off from work in order to monitor closely. When attempting this for the first time, only try one chick the first night leaving a few original canary eggs. If the female canary accepts and feeds the chicks, add the rest of the Siskin clutch the next afternoon or evening. Again, transferring the balance of canary eggs with the rest you already moved.

CHICK FOOD . . . Always feed a good soaked Siskin mix and hardboiled egg food sprinkled with supplements. Most breeders use the basic hand-feeding formula sprinkled over the fresh boiled egg. Other ingredients you could use are bee pollen or unmedicated game bird food ground to a powder. I use Skip's Soya Musca. There are many recipes out there to choose from.

DEHYDRATION IN BIRDS

ALL RIGHTS RESERVED

by Ron Castaner

Former NFSS President

AFA South Florida Regional Director

E-mail: finches@bellsouth.net

Everyone should recognize and understand dehydration in birds. To dehydrate something is to remove all the moisture. When this happens the body and organs cannot operate normally and the disease will become stronger and harder to cure. Most sick birds die of dehydration first, not the illness that caused their problem. A sick bird drinks very little water or no water at all. Make sure there is water low in the cage, especially when the bird is unable to perch. At this point you must give electrolyte with a crop needle or by eye-dropper feeding.

GATORADE OR PEDIOLITE

Both are good but you must realize the liquid is only good for 24 hours after it is opened. If you can find powder electrolyte it is better, lasts longer, and there is very little waste.

When birds are short of energy they lose their willingness to live, which is why they will not drink, causing escalation of the illness. While the electrolyte is important, the heat lamp is needed to keep the bird warm. The temperature should be maintained at 90 degrees with 80 percent humidity. This is a must, so the bird does not become dehydrated. When a bird loses body water the blood flows to the muscles and the fluid is withdrawn from the muscle tissues to compensate for water loss. Once water is taken from the muscle, it cannot function properly and the bird cannot fly. Even without infections, toxins, or starvation at this stage the birds are less able to fly and they become more stressed.

The sudden weight loss in sick birds is not protein loss, but in fact the loss of water. The bird is dehydrated. Birds can lose 30 percent of their body water (weight) and appear normal. By the time the weight loss is noticed, the bird is in very serious condition and the chance to turn this around is very hard, if not impossible, especially if it has been sick for a long time.

PREVENTION

This is much cheaper than the treatment. Most birds taken to the vet. as emergencies have a history of inadequate water intake. Early fluid replacement will help the bird replace fluid without interfering with treatments.

Veterinarians have several ways to administer fluids: under the skin, into the muscle, intravenous, and into the bone marrow. These are things the average bird-keeper cannot do but they can administer oral supplements like electrolytes or Gatorade to prevent dehydration. This will help prevent damaging any internal organs more than they already are and will keep birds from becoming more stressed.

The crop needle is the best way to administer fluids and medications. You can try an eye-dropper but sometimes the bird can choke. Crop needles are quick, safe, and effective. The fluid is given directly into the crop and you are sure the bird is taking it.

Another necessity is the hospital cage. Rather than try to determine if the bird is dehydrated, it is better to treat them as such. Sick birds pose a problem of what to do. Placing a sick bird in the hospital cage and electrolyte crop-feeding is a good start to the bird's recovery. The longer you wait the more damage is done to internal organs. To restore the bird to normal health after the effects of dehydration occur will take longer, if at all.

Sick birds stop eating. Instead, they spend most of the day in the seed bowl and drinking very little if any water. It is necessary to provide a high-protein, easily digested diet, and using the crop needle is the best way. In such cases a hand-feeding formula with a little papaya can be used for a few days then soft egg food with soaked seed. The high-protein diet and water is quickly absorbed, supplying the bird with desperately needed fluids to give it a better chance to start fighting any disease or infection it might have. Contact your vet. if the bird is not better in a few days.

QUARANTINE

One way to detect or eliminate problems before they enter your aviary is to quarantine all new birds.

The purpose is to detect or eliminate any potential problems before they can enter into your collection or aviary. You must observe all the birds in quarantine for any signs of diseases, like wheezing, gasping, weight loss, soiled vent, eye or nasal discharge, prolonged inactivity, eating too much, or always in the seed dish.

A few diseases are external parasites (lice and mites), internal parasites (worms), Protoza (canker, coccidia), Psittacos, nutrition, and others. They have been studying a new one the last few years called megabacteria. You will hear a lot about these bacteria in the future,

Managing finches is a little different from parrots and other birds. The finch's requirements are different. For one thing, they require more shelters. Solid walls are needed for safety so they feel more secure. Protection is needed, especially from direct winds or drafts, ventilation is a must, and the floor should be dry. Extremely important is making certain clean water is always available. And, don't forget, regular cleaning is needed. Seed mixes should always be fresh and clean. Seed-borne disease is very common so be careful.

Soak-seed should be supplied all year-round. Oil and herb seed should be used during the winter to provide extra energy and fat to withstand the lower temperatures. Many finches require insect protein which will keep them healthy and eliminate stress.

A good observation, rapid first aid, and professional help should save the birds. Ask for help from your bird club or ask other breeders for help. We are losing too many finches from inexperience.

Closed, Sequentially Numbered Bands Below Are Available to Members Only

Size A (2.20mm): Gold-breasted Waxbill, Orange-cheeked Waxbill, Owl Finch, Red-eared Waxbill,
Size B (2.34mm): Black-cheeked Waxbill, Cordon Bleu, Cuban Melodious Finch, Fire Finch, Olive Finch, Rufus-backed Mannikin, Timor Zebra
Size C (2.55mm): Violet-eared and Blue-capped Waxbills, Cherry Finch, Bronze-winged Mannikin, Green/Grey Singing Finch, Pytilas, Red-headed and Forbes Parrot Finch, Silverbills, Star Finch, Red Siskin, Society, Cutthroat Finch

Size D (2.73mm): Blue-faced Parrot Finch, Gouldian Finch, Chestnut-breasted, most Mannikins, most Parrot Finches, Pintailed Nonpareil, most Twinspots, American Zebra Finch, Peales Parrot Finch
Size 2 (2.89mm): Black-crested Finch, Diamond Sparrow, European Greenfinch, Golden Song Sparrow, Nuns, Peter's Twinspot, Siskins, Spice finch, European Goldfinch, European Zebra

Size G (3.20mm): Magpie Mannikins, Siberian Goldfinch, small Tanagers
Size J (3.4mm): Pekin Robin, Silver-eared Mesias, small Softbills
Size K (3.50mm): Java Rice birds, Red-crested Cardinal, Saffron Finch, Shama Thrush
Size L (4.30mm): Diamond Dove, Mousebird, small Doves, Quail
Size M (4.48mm): Leaf Birds, Pagoda Mynah, Superb Starlings

FORUM TIDBITS

Below are comments, tips, advice, and general information posted by NFSS members on the Forum. Please be aware articles are provided as a resource only. The validity and certainty of this information is not the responsibility of NFSS. NFSS cannot guarantee the results of the content.

LEARNING THE HARD WAY—#1. I have a 2-inch gap at the end of the foster cages. One day I found 3 Shaft-tail finches stuck there - all dead. **#2.** I once found a Shaft-tail dead in a net. **#3.** I let five Societies loose in the small aviary, not expecting one to go down to the ground. As I walked out I noticed a bird on the cage bottom. A few minutes prior it had been in my hand so I didn't realize I had stepped on it. *Please learn from my mistakes.*

SPIDERS—I have been raising finches for 20 years. I did not realize Black Widow spiders would colonize a bird net.

BORED BIRDS—Birds seem to have an infinite amount of time to creatively find ways of injuring or killing themselves. I once had a recently fledged chick hitch a ride out of the aviary by hanging on my back. I did not feel the chick until I noticed my little dog chasing it across the yard. Luckily, the chick was caught unharmed and returned to the aviary.

METAL-TIPPED BOTTLE SPOUTS—I also never realized that the metal-tipped spouts on glass drinking bottles would freeze solid.

WATER—The most common way we lose our birds is water-related. Sometimes the ball at the end of a water bottle will get stuck. Not realizing this, the birds are unable to get water. Now I shake each bottle to make certain water comes out the ball.

FLIGHT DOORS—My walk-through flights allow walking from flight to flight. I decapitated two diamond Fire-tails in one swing of the door going from one flight to the other.

SQUINTING BIRDS—Watch for and learn to react to squinting. Thirsty birds squint. I've likely saved more birds repeating this than by anything else I've ever said. My source: Robert Black. Good advice pays off over and over.

CHECKING WATER BOTTLES—I learned the hard way to always check water bottles. Now, before I leave the aviary each morning I check *each* bottle and say "They have water, they have water." By doing this double-check I rarely miss a cage now.

STARVED BIRDS—I knew someone who put sprays of millet in the bird seed Planix jars along with the bird seed. They did this thinking the birds would get a treat now and then. When they returned home from being gone several days they found dead birds on several of the cage floors. The spray millet had blocked passage of the seed, causing many birds to starve to death, even though they had full jars of seed.

BUTTON QUAIL WITH MANY LIVES—I noticed my buttonquail was missing. She had popped up in the air, as buttonquail often do, and landed in a bucket of diluted bleach-vinegar water. I found her floating and limp. I held her upside down, stroked her chest toward her mouth. As a little water came out of her mouth I noticed her flinch. I put her in a bowl and laid her in the sun, where she slowly came around. Months later she was literally blown out of the aviary during a freak storm. The doors have spring closers and latches. The latch to one door wasn't fastened and blew open. I found her two days later walking in the yard. She lived an un-eventful life after that. And yes, I realize this story is a little odd.

FINCH AND SOFTBILL SAVE PROGRAM

The Finch and Softbill Save program (**FSS**) was established in 1988. Over the years program requirements have changed but the definition and purpose of the program has not.

LONG-TERM GOAL—To establish a consortium of breeders of finches and softbills dedicated to producing and maintaining a viable captive-bred population of finches and softbills in the United States and Canada.

SHORT-TERM GOAL—To establish consistent breeding success with participating species in the United states and Canada.

FSS benefits conservation by maintaining studbooks of domestically bred birds in the program. In addition, **FSS** provides a hub for networking. To participate, you must be an NFSS member in good standing and it is required all birds in the program be banded with numbered bands. Closed bands are preferred but **FSS** understands this is not always possible and imported birds cannot be closed-banded.

BIRD INFORMATION—When ownership of a bird is transferred, the bird's records can be transferred to the new owner. Data collected by this program is for its own analysis and not intended to replace your records. Therefore, it is imperative you keep your own separate records.

FSS GROUPS

- NFSS-FSS—*Amandav*—Strawberries Goldbreast
- NFSS-FSS—*Corduelis cucullata*—Red Siskins
- NFSS-FSS—*Coliidae*—Mousebirds
- NFSS-FSS—*Erythrura*—Parrot Finches
- NFSS-FSS—*European*—Softbills
- NFSS-FSS—*Pyronotus*—Bulbuls
- NFSS-FSS—*Serinus*—Group
- NFSS-FSS—*Uraeginthus*—Blue Purple Waxbills

All NFSS members are strongly encouraged to join one or more of the above groups. For information, please contact the **FSS** Director.

2011 FSS CENSUS RESULTS

The 2011 Census is now over. We ran the Census this year in January and February, but the Census was held open through May because of the delay in receiving Journals with the Census announcement.

Thank you to everyone who participated. As always, we still have a lot of work to do to reach many of the hobbyists out there, but we will keep pushing in that direction. All help spreading the word about the Census to members and non-members alike is greatly appreciated.

We had a total of 6,562 birds entered in the 2011 Census, with 86 people participating and 189 species being represented. Included in this journal are the total counts by species and mutation. For more detailed statistics and contact information from hobbyists who chose to share that information, please visit the Census results online at <http://www.nfss-fss.org/Census>

Thank you for participating!
 Vonda Zwick, FSS Director

2011 FSS CENSUS

Note: One record was omitted from the tallies and the Census data reported herein because of the high likelihood that the record was inaccurate or made in error. This record was made by an anonymous participant and it was the only record entered by this participant. The following was the data in the removed record: Zebra Finch (Fawn-cheeked): 2,000 hens, 2,000 cocks, 4,000 unsexed.

A Little Bit of Yesterday

NFS started with five affiliated clubs and three more considering affiliating.

Affiliated Clubs

- Connecticut Association for Aviculture
- New Hampshire Avicultural Society
- Boston Society for Aviculture
- Long Island Cage Bird Association
- Maryland Cage Bird Society

Clubs Considering Affiliation

- Western New England Cage Bird Society
- Massachusetts Cage Bird Association
- Harrisburg (Central Pennsylvania Cage Bird Association)

In September 1984 NFS had grown to 10 affiliated clubs.

- Connecticut Association for Aviculture
- New Hampshire Avicultural Society
- Boston Society for Aviculture
- Long Island Cage Bird Association
- Maryland Cage Bird Society, Inc.
- Central Pennsylvania Cage Bird Association
- Astoria Bird Club, Inc.
- Maryland Cage Bird Society, Inc.
- Western New England Cage Bird Society
- Massachusetts Cage Bird Association, Inc.

2011 SHOW REPORTS

Columbia Canary & Finch Club • Portland, Oregon

DATE: November 5, 2011

JUDGE: Laura Bewley

NUMBER OF ENTRIES: 70 NUMBER OF EXHIBITORS: 16

AWARDS	SPECIES	BAND NO.	EXHIBITOR	PTS.
1 st	Isabel Shaft-tail hen	02646-10-NFS	KJ Brown	7
2 nd	Blue-bill Mannikin	KJ 701-11	KJ Brown	6
3 rd	Normal English Zebra Cock	11921-10-NFS	KJ Brown	5
4 th	Red-face Isabel Star Pied Cock	09081-11-NFS	KJ Brown	4
5 th	CFW Zebra Cock	713-10-NFS	Dezirae Lord	3

2012 NFSS AFFILIATED CLUBS

AFFILIATIONS AWARDS DIRECTOR: JODY LEWIS
 755 N. 4TH AVE. • CANTON, IL 61520 • 309-645-7773
affiliationsdirector@nfss.org

The National Finch and Softbill Society is a non-profit organization comprised of many volunteers who work hard to promote the hobby, local clubs, bird shows, and conservation. NFSS is proud of its affiliated clubs and societies. If you are not one of our clubs, we invite you to affiliate with NFSS and become part of our society. A few of the benefits we offer follow.

- Receipt of the bi-monthly Journal six times per year
- Free listings for the Clubs will be published in the Journal
- The opportunity to join one of our many programs dedicated to promote aviculture and the preservation of all birds
- Plastic and aluminum closed bands
- A professional panel of sanctioned judges, each with many years experience
- Clubs can purchase the following awards:
 Rosettes
 Plaques with NFSS logo for service, show awards, breeder awards

The annual club affiliation fee is \$30.00. To affiliate with NFSS, please contact our Affiliations Awards Director, Jody Lewis (see above). If it is more convenient, you may also go to <http://www.nfss.org> and sign up online. **NOTE:** If you are an Affiliated Club and need to revise your information, please contact the NFSS Affiliations Director, Jody Lewis, or the editor.

ALABAMA

Central Alabama Aviculture Society, Montgomery

JUST FINCHES and Softbills Magazine

While focusing primarily on Australasia, this magazine incorporates what's happening with finches & softbills from many overseas locations as well, including, South Africa, America, Europe and the U.K.

Published quarterly, we look at many different species as well as breeders setups. We also have a Question & answer section and provision for comments from a leading avian vet.

Growing in distribution with each issue.

Why not subscribe ?

4 Issues cost just \$48.00NZD posted anywhere in the U.S.A.

Airsac Mite Infestation?

Airsac mite is an internal parasite that lives in the airways, lungs and air sacs of our birds. Infestation causes local irritation and secondary respiratory infections. Heavy infestations can cause death in fledglings and adult birds.

S76, the Original Airsac mite treatment in water! If you have lots of birds making it almost impossible to catch for treatment, then **S76** is for you!

S76 treatment is so safe it can be administered to breeding parents feeding their babies! **S76** will not cause harm to the health and fertility of mature birds, fledglings or eggs.

Call or email us with your bird health question.

800-579-7974 support@ladygouldianfinch.com

Don't let the mites bite

Improve your birds' health, rid them of freeloading parasites.

Dr Rob Marshall's **S76** is the first choice for

Air sac mite treatment
in water or on the skin.

Mention **NFSS** when you place your order and receive a **10% DISCOUNT**
